

Please **AMEND** the **CLAIMS** as follows:

1. (Currently Amended) A method of triggering roaming in a network device, comprising:

detecting a speed of the network device;

ascertaining one or more ~~trigger~~ threshold values corresponding to one or more trigger events ~~and at the detected speed of the network device, wherein the one or more trigger values corresponding to the one or more trigger events are threshold values associated with the detected speed of the network device, wherein the one or more trigger~~ threshold values have been configured at the network device;

~~maintaining one or more trigger counters~~ ascertaining one or more trigger values associated with the one or more trigger events; and

triggering roaming when one of the trigger ~~counters~~ values associated with one of the trigger events is equal to or exceeds one of the ~~trigger~~ threshold values that correspond ~~corresponding to the one of the trigger events and at the detected speed of the network~~ device.

2. (Original) The method as recited in claim 1, wherein the network device is a Mobile Node implemented in a 802.11 environment.

3. (Original) The method as recited in claim 1, wherein the network device is a Mobile Node supporting Mobile IP.

4. (Original) The method as recited in claim 1, wherein roaming is triggered when the network device has reached or is nearing a perimeter of a coverage area of an Access Point to which the network device has associated or a Foreign Agent via which the network

device has registered with its Home Agent

5. (Original) The method as recited in claim 1, wherein roaming is triggered when the network device is no longer within a coverage area of an Access Point to which the network device has associated or a Foreign Agent via which the network device has registered with its Home Agent.

6. (Currently Amended) The method as recited in claim 1, wherein ascertaining comprises:

obtaining the one or more ~~trigger~~ threshold values corresponding to one or more trigger events and the detected speed of the network device from a profile, wherein the profile includes a ~~set of~~ plurality of sets of threshold values, each of the plurality of sets of threshold values including one or more ~~trigger~~ threshold values corresponding to one or more trigger events, wherein each of the plurality of sets of threshold values corresponds to a different set of one or more speeds of ~~at a~~ plurality of speeds.

7. (Original) The method as recited in claim1, wherein the rate at which the network device roams increases as the speed of the network device increases.

8. (Currently Amended) The method as recited in claim 6, wherein the ~~trigger~~ one or more threshold values decrease as the speed of the network device increases.

9. (Currently Amended) The method as recited in claim 1, wherein the trigger events include at least one of maximum data retry count is exceeded, maximum number of beacons missed is exceeded, data rate shift, ~~and~~ or signal strength.

10. (Currently Amended) The method as recited in claim 9, wherein the ~~trigger~~ threshold values include at least one of maximum data retry count, maximum number of beacons missed, maximum data rate shift, ~~and~~ or minimum signal strength.

11. (Currently Amended) The method as recited in claim 10, wherein roaming is triggered when one of the trigger ~~counters~~ values associated with the maximum data retry count is exceeded trigger event is equal to or exceeds the maximum data retry count ~~trigger~~ threshold value.

12. (Currently Amended) The method as recited in claim 10, wherein roaming is triggered when one of the trigger ~~counters~~ values associated with the maximum number of beacons missed is exceeded trigger event is equal to or exceeds the maximum number of beacons missed ~~trigger~~ threshold value.

13. (Currently Amended) The method as recited in claim 10, wherein roaming is triggered when one of the trigger ~~counters~~ values associated with the data rate shift trigger event is equal to or exceeds the maximum data rate shift ~~trigger~~ threshold value.

14. (Currently Amended) The method as recited in claim 10, wherein roaming is triggered when one of the trigger ~~counters~~ values associated with the signal strength trigger event is less than the minimum signal strength ~~trigger~~ threshold value.

15. (Original) The method as recited in claim 1, wherein detecting a speed of the network device is performed using a GPS.

16. (Original) The method as recited in claim 1, wherein the network device is a Mobile Node, the method further comprising:

registering with a Home Agent via a new Foreign Agent using a new Access Point when roaming is triggered, wherein the Mobile Node is within a coverage area of the new Foreign Agent and the new Access Point.

17. (Original) The method as recited in claim 16, further comprising:

de-registering with the Home Agent via a new Foreign Agent using a new Access Point, wherein the Mobile Node is no longer within a coverage area of the previous Foreign Agent.

18. (Original) The method as recited in claim 1, wherein the network device is a Mobile Node, and wherein when roaming is triggered, the Mobile Node is no longer within a coverage area of a Foreign Agent via which the mobile node has registered with its Home Agent.

19. (Original) The method as recited in claim 1, wherein when roaming is triggered, the network device is no longer within a coverage area of an Access Point servicing the network device.

20. (Currently Amended) A method of triggering roaming in a network device, comprising:

detecting a speed of the network device;

ascertaining one or more ~~trigger~~ threshold values corresponding to one or more trigger events and ~~at~~ the detected speed of the network device, ~~wherein the one or more trigger~~

~~values corresponding to the one or more trigger events are threshold values associated with the detected speed of the network device, wherein the one or more trigger threshold values have been configured at the network device;~~

~~maintaining one or more trigger counters~~ ascertaining one or more trigger values associated with the one or more trigger events; and

triggering roaming when one of the trigger ~~counters~~ values associated with one of the trigger events less than or equal to one of the ~~trigger threshold~~ values that correspond ~~corresponding to the one of the trigger events and at the detected speed of the network device.~~

21. (Currently Amended) A method of triggering roaming in a network device, comprising:

detecting a speed of the network device;

modifying one or more ~~trigger threshold~~ values corresponding to one or more trigger events such that the one or more ~~threshold trigger~~ values correspond to the detected speed of the network device, ~~wherein the one or more trigger values corresponding to the one or more trigger events are threshold values associated with the detected speed of the network device;~~

~~maintaining one or more trigger counters~~ ascertaining one or more trigger values associated with the one or more trigger events; and

triggering roaming when one of the trigger ~~counters~~ values associated with one of the trigger events is equal to or exceeds one of the ~~trigger threshold~~ values that correspond ~~corresponding to the one of the trigger events and at the detected speed of the network device.~~

22. (Currently Amended) The method as recited in claim 21, wherein modifying one or more ~~trigger~~ threshold values comprises:

multiplying the one or more ~~trigger~~ threshold values by one or more multiplying factors, wherein each of the multiplying factors corresponds to the speed of the network device.

23. (Currently Amended) The method as recited in claim 22, wherein each of the multiplying factors decreases the one or more threshold ~~trigger~~ values when the speed of the network device increases.

24. (Currently Amended) The method as recited in claim 22, wherein each of the multiplying factors increases the one or more ~~trigger~~ threshold values when the speed of the network device decreases.

25. (Original) The method as recited in claim 22, further comprising:
ascertaining the multiplying factors corresponding to the speed of the network device.

26. (Currently Amended) The method as recited in claim 22, wherein multiplying comprises:

multiplying the one or more ~~trigger~~ threshold values by a single multiplying factor.

27. (Currently Amended) The method as recited in claim 22, wherein multiplying comprises:

multiplying each of the ~~trigger~~ threshold values by a different multiplying factor,

wherein the multiplying factor corresponds to the trigger event.

28. (Original) The method as recited in claim 1, wherein the network device is a Mobile Node, the method further comprising:

registering with a Home Agent via a Foreign Agent when roaming is triggered, wherein the Mobile Node is within a coverage area of the Foreign Agent.

29. (Original) The method as recited in claim 28, further comprising:

de-registering with the Home Agent via a new Foreign Agent, wherein the Mobile Node is no longer within a coverage area of the previous Foreign Agent.

30. (Original) The method as recited in claim 1, wherein the network device is a Mobile Node, and wherein when roaming is triggered, the Mobile Node is no longer within a coverage area of a Foreign Agent via which the mobile node has registered with its Home Agent.

31. (Currently Amended) A method of triggering roaming in a network device, comprising:

detecting a speed of the network device;

modifying one or more ~~trigger~~ threshold values corresponding to one or more trigger events such that the one or more threshold ~~trigger~~ values correspond to the detected speed of the network device, ~~wherein the one or more trigger values corresponding to the one or more trigger events are threshold values associated with the detected speed of the network device;~~

~~maintaining one or more trigger counters~~ ascertaining one or more trigger values associated with the one or more trigger events; and

triggering roaming when one of the trigger ~~counters~~ values associated with one of the trigger events is less than or equal to one of the ~~trigger~~ threshold values that correspond ~~corresponding to the one of the trigger events~~ and at the detected speed of the network device.

32. (Currently Amended) A computer-readable medium storing thereon computer-readable instructions for triggering roaming in a network device, comprising:

instructions for detecting a speed of the network device;

instructions for ascertaining one or more ~~trigger~~ threshold values corresponding to one or more trigger events and at the detected speed of the network device, ~~wherein the one or more trigger values corresponding to the one or more trigger events are threshold values associated with the detected speed of the network device,~~ wherein the one or more ~~trigger~~ threshold values have been configured at the network device;

instructions for ~~maintaining one or more trigger counters~~ ascertaining one or more trigger values associated with the one or more trigger events; and

instructions for triggering roaming when one of the trigger ~~counters~~ values associated with one of the trigger events is equal to or exceeds one of the ~~trigger~~ threshold values that correspond ~~corresponding to the one of the trigger events~~ and at the detected speed of the network device.

33. (Currently Amended) An apparatus for triggering roaming in a network device, comprising:

means for detecting a speed of the network device;

means for ascertaining one or more ~~trigger~~ threshold values corresponding to one or more trigger events and at the detected speed of the network device, ~~wherein the one or more~~

~~trigger values corresponding to the one or more trigger events are threshold values associated with the detected speed of the network device, wherein the one or more trigger threshold~~
values have been configured at the network device;

~~means for maintaining one or more trigger counters~~ ascertaining one or more trigger values associated with the one or more trigger events; and

~~means for triggering roaming when one of the trigger counters values associated with one of the trigger events is equal to or exceeds one of the trigger threshold values that correspond corresponding to the one of the trigger events and at the detected speed of the~~
network device.

34. (Previously Presented) An apparatus for triggering roaming in a network device, comprising:

a processor; and

a memory, at least one of the processor and the memory:

detecting a speed of the network device;

ascertaining one or more ~~trigger threshold~~ values corresponding to one or more trigger events and at the detected speed of the network device, wherein the one or more trigger values corresponding to the one or more trigger events are threshold values associated with the detected speed of the network device, wherein the one or more trigger threshold values have been configured at the network device;

~~maintaining one or more trigger counters~~ ascertaining one or more trigger values associated with the one or more trigger events; and

triggering roaming when one of the trigger ~~counters~~ values associated with one of the trigger events is equal to or exceeds one of the ~~trigger threshold~~ values that correspond corresponding to the one of the trigger events and at the detected speed of

the network device.

Please **ADD** new claims as follows:

35. (New) The method as recited in claim 6, wherein obtaining the one or more threshold values corresponding to one or more trigger events and the detected speed of the network device comprises:

identifying one of the plurality of sets of threshold values that corresponds to a set of one or more speeds that includes the detected speed of the network device.

36. (New) The method as recited in claim 1, wherein each of the threshold values corresponds to a different one of the trigger events.
